

Capture, View, Show and Share your aging 35mm slides with your own smart phone and this very clever tool!

Quick. Simple. Inexpensive.
High quality DIY digital transfers.

PROBLEM:

- Old slide projectors are inconvenient and don't allow for quick and remote sharing of images.
- Once beautifully-saturated slides celebrating your most important life moments and relationships — are degrading and deteriorating.
- Decay occurs in varying degrees of loss in color, contrast, grain, sharpness and tonal range depending upon the film base, dyes used in the layers of emulsion, quality of chemicals used and care taken in processing.

As a consequence, millions of boxes of valuable images that might otherwise be treasured memories for many generations are stowed away in attics, closets and garages — fading away.

ANSWER: GOT SLIDES TO SHARE? DIGITIZE, NOW!

If you're a Family, Historian or Genealogist, Museum or Church Archivist, Memory Video Producer, Photographer, Designer, or Hobbyist, chances are you'll want to convert scores of your best slides.

You need a solution that yields high quality digital conversions, quickly, easily, and at a low price.

Voile! Introducing the remarkable:

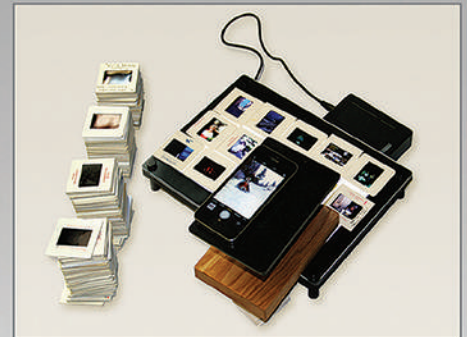

BEST SOLUTION TO DIGITAL FILE CONVERSION

Designed by a professional engineer, SlidesClick™ integrates three essential functions for fool-proof slide conversions:

- Steady camera positioning
- Accurate slide positioning
- Simple, vibration-free stability

Not included is a commercially available Light Source ("Table", "Box" or "Pad"), and your Smart Phone.
